Egg Donation treatment

Dexeus Mujer is providing you with all the necessary information for you to take a step forward towards maternity. You can find here a **detailed description of all the stages of the process and the medical treatment**, so you can take your decision knowing exactly what will be happening at all times.

1. Visit

The process begins with a **first visit** with one of our gynaecologists. This first visit is **totally free**.

2. Tests

Depending on your needs, we will ask you **some tests in order to make an accurate diagnosis**. If the result is not decisive, we will perform a second phase of complementary tests.

A **comprehensive Fertility study** is usually carried out. It costs €125 and includes:

· Tests done on the woman:
- Anti-Müllerian hormone (AMH) blood test
- Gynaecological ultrasound (ovarian profile)
· Tests done on the man:
- Semen analysis
· Results' visit

3. Start

Egg donation cycle activation and start of the treatment. You can see the details on the next page.

Dexeus Mujer. Gran Vía de Carles III, 71-75. 08028 Barcelona.

Egg Donation, step by step

1 Donor's assignation

We will select the right donor for you, performing a personalised matching to ensure that the donor will have physical characteristics similar to yours

2 Donor's hormonal treatment

During her stimulation treatment, the donor will perform some ultrasound and hormonal controls.

3 Donor's oocytes retrieval

Donor's oocytes retrieval to inseminate in the laboratory.

4 Oocytes insemination

The donor's oocytes shall be inseminated in the In Vitro Fertilisation laboratory with the sperm sample. The sample could be frozen or fresh, as considered by specialists.

5 Fertilisation and embryos' development

Embryos will stay in culture in IVF laboratory between 5 and 6 days. We will evaluate their daily development in order to establish their viability.

6 Embryos' cryopreservation

In most cases, evolutionary embryos will be cryopreserved in liquid nitrogen.

7 Embryo transfer

The embryo transfer will be carried out in the next cycle or, in some cases, it could be carried out fresh in the same cycle.

Using a simple procedure, a blastocyst (a high-quality embryo with the best prognosis) is placed inside the uterus. This process is performed with ultrasound control and does not require anaesthesia.

8 End of the cycle: the pregnancy test

A few days later, you will be asked to perform a pregnancy blood test and, afterwards, an obstetrical ultrasound during the 6th week of pregnancy. After that, we will indicate you the next steps to follow.

Why choose us?

10 Reasons to trust Dexeus Mujer

Our success rates speak for themselves

The **success rates** of In Vitro Fertilisation treatments with donated eggs in Dexeus Mujer are **64%** (Basic Egg donation) and **83%** (Plus Egg donation).

The best results come from experience

With more than 50 years of experience, we are **pioneers in Reproductive Medicine** in Spain. In Dexeus Mujer was born the **first baby through IVF in Spain in 1984** and also took place the birth of the first baby (twins) as a result of egg donation in our country (1988).

Own laboratories and multidisciplinary team

We have one of the most important In Vitro Fertilisation laboratories in Europe, which carries out more than 3,000 cycles per year. We have our own laboratories for **In vitro Fertilisation, Pre-implantation Genetic Diagnosis (PGD), Andrology and Cryopreservation**, which centralises and speeds up the results.

Quality guarantee

Our egg donation program guarantees a **rigorous selection of donors**, through the most comprehensive health and genetic study on the market, in order to reduce the risk of transmission of possible genetic diseases.

Hospital environment

You seek safety and we guarantee it. We have a **high-level hospital environment**, which guarantees the best medical care, with a **24 hours emergency service**. The hospital is COVID-19 Applus Hospital Safe certified.

Technology improves the results

We have the latest technological advances, such as sperm microinjection (ICSI) or embryo development monitoring in real time (embryo dynamic monitoring), so you can follow the treatment, step by step, with the highest success rate.

Fixed price

At Dexeus Mujer we offer you a fixed price, including donor's medication and everything involving the treatment.

Time optimisation and maximum comfort

Your time and comfort are very important to us. For this reason, **we combine the entire circuit** of diagnoses, treatments, consultations and interventions **into a single center**. In addition, we will take care of you without waiting lists, so you can start your treatment as soon as you are ready.

We understand and support you

At Dexeus Mujer we offer you a range of **additional services**, such as psychological support, acupuncture or nutrition, which can help you throughout the process.

Personal attention

We make a personalised follow-up in every single case. In addition, it is essential that you can communicate with the medical team in **the language you are most comfortable with**. With us you can do it in Spanish, Catalan, English, French, Italian, German, Russian and Arabic.
